## Introduction

Each school day throughout Michigan there are more than 850,000 students transported on over 17,000 school buses. These 17,000 plus school buses travel nearly 10 million miles each year. School buses are unquestionably the safest vehicle used for transportation on the road today. With this fact in mind the question remains, "Can riding a school bus be made even safer?" After all, school buses transport this state's most precious cargo, our children.

The Michigan Department of State Police Traffic Services Section conducted an analysis of all school buses crashes in an effort to identify whether there were any specific factors unique to those crashes and if so, whether there were any identifiable measures to address those factors.

This publication reports those findings.

The data utilized for this analysis was derived from information supplied on the Official Traffic Crash Report (UD-10). All data was analyzed as submitted and no attempt has been made to assume any information other than what was originally input. This study analyzed a total of 3,948 crashes over the three-year period 2001 through 2003.

Additional historical data was obtained from the Michigan Crash Facts booklets publicized by the Office of Highway Safety Planning and the University of Michigan Transportation Research Institute.

It is important to note that the number of crashes analyzed and reported in this study differs from the crashes "officially" reported by the Criminal Justice Information Center (CJIC). The reason for this difference is that each UD-10 for the period studied was reviewed by hand. Some of the reports were coded incorrectly and either did not involve a school bus or involved a school transportation vehicle other than a school bus. This analysis does not claim to dispute those "official" numbers.

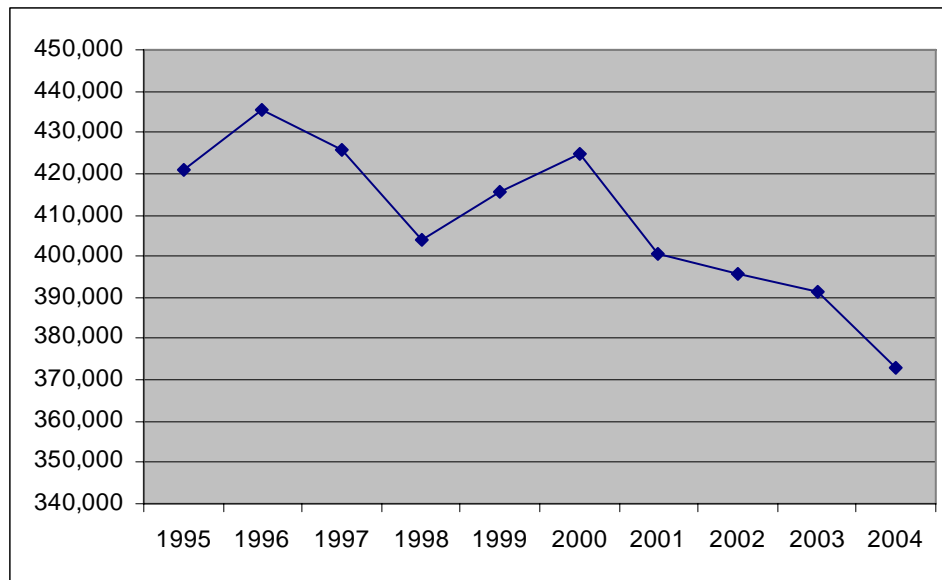

The Official Traffic Crash Report (UD-10) collects data in relation to school bus involvement under "Special Circumstances." The UD-10 Instruction Manual explains that, "school bus shall be selected in situations where a school bus is related to the crash in any way. This includes situations where the school bus was a contact vehicle or where other units crashed due to the presence and influence of a school bus, even though the bus itself was not a contact unit."

This "Special Circumstances" section is unique to school buses as no other type of vehicle is afforded the same level of scrutiny.

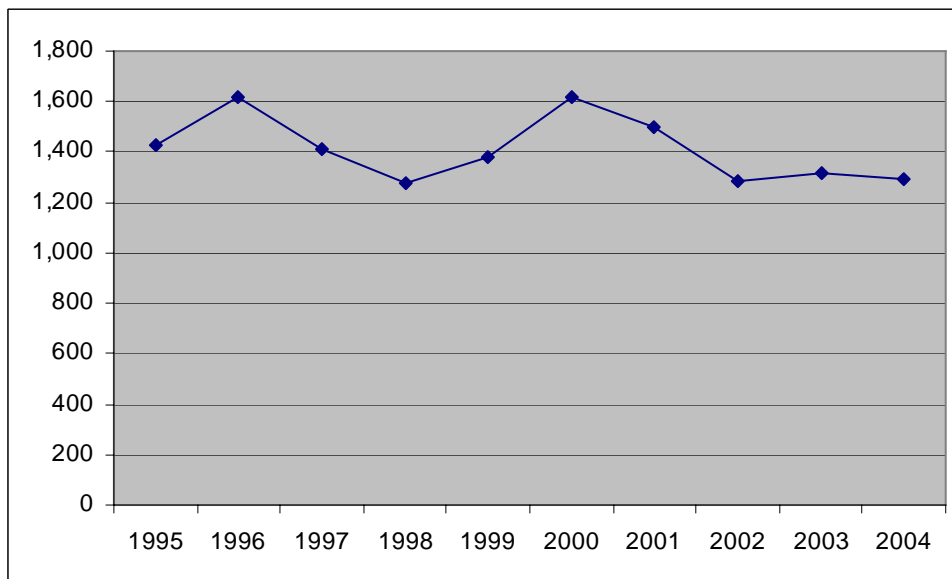

## Historical Data

Graph 1 shows the overall number of traffic crashes in Michigan decreased by 16.7% for the 10-year period 1995 through 2004. Graph 2 shows the number of school bus related crashes decreased 17.6% for the same period.

Graph 1: All Crashes

Graph 2: School Bus Related Crashes

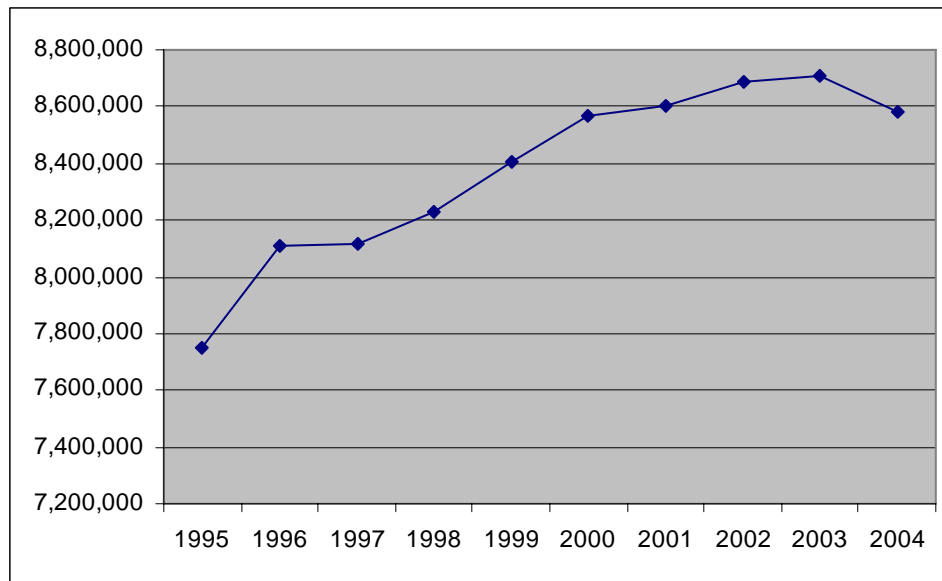

On average, school buses were involved in 0.345% of all crashes yet school buses account for only .206% of all registered vehicles in Michigan from 1995 through 2004.

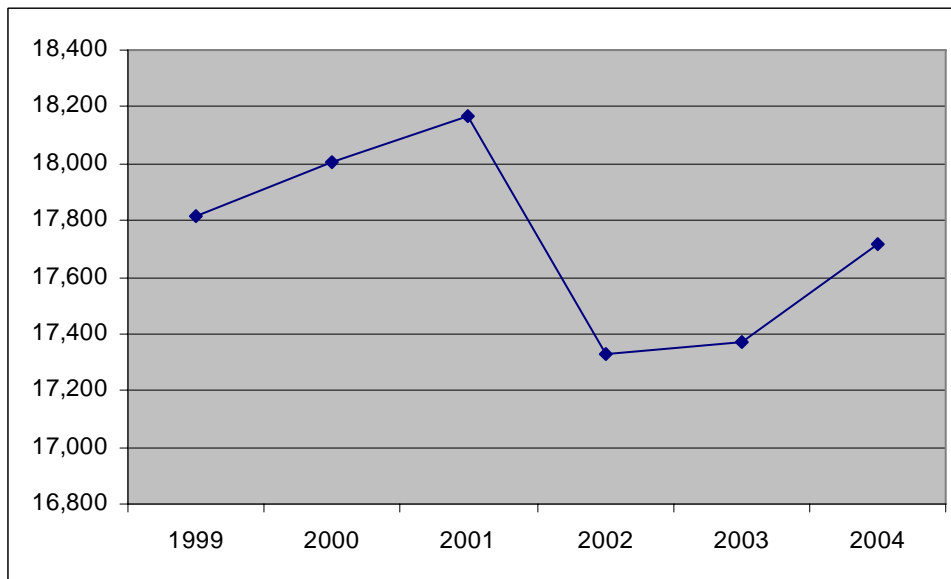

Graph 3 shows the number of registered vehicles in Michigan from 1995 through 2004.

Graph 3: Number of Registered Vehicles

Graph 4 shows the number of registered school buses from 1999 through 2004. Numbers prior to 1999 were not available.

Graph 4: Number of Registered School Buses

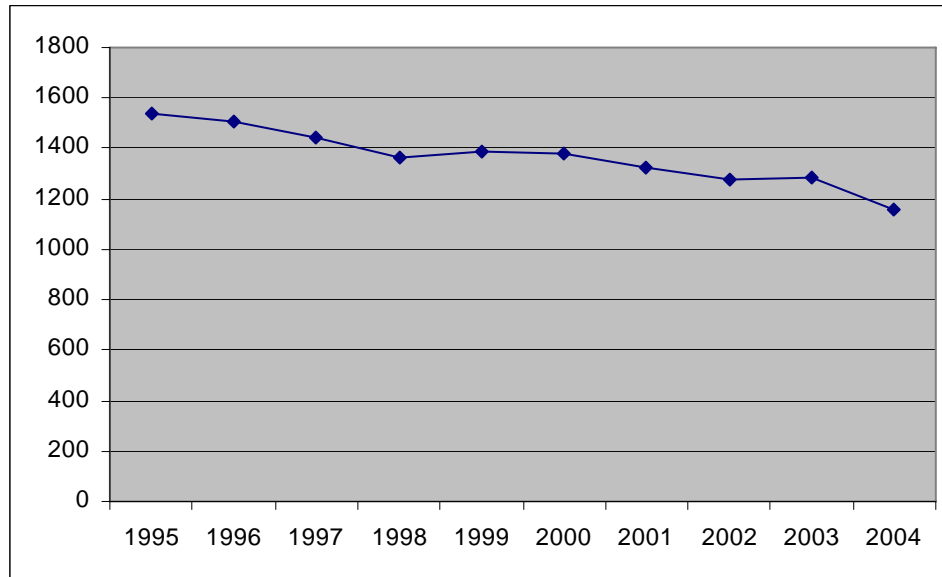

On average, approximately 7.84% of Michigan's entire school bus fleet is involved in a traffic crash each year.

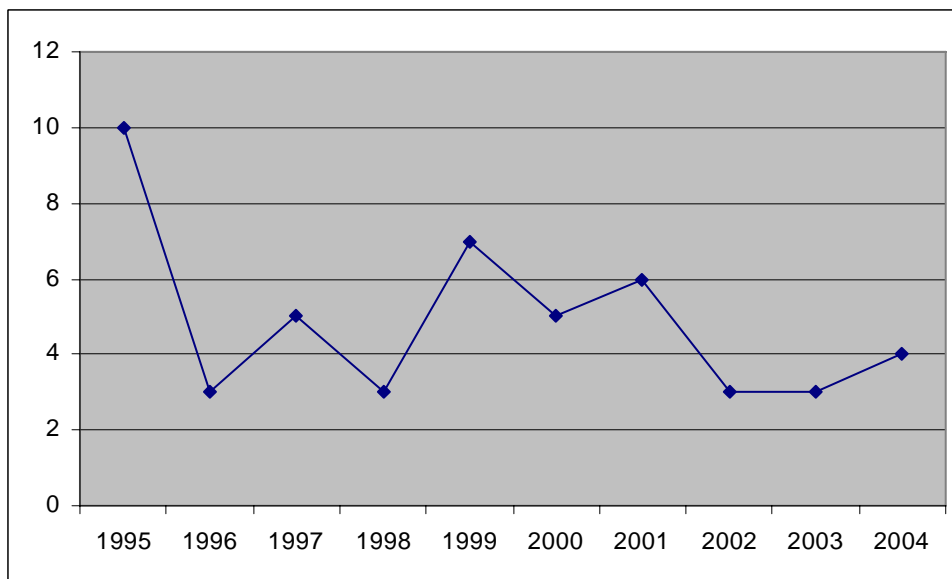

From 1995 through 2004, 13,672 persons died in Michigan's traffic crashes of which, 49 (0.35%) were killed in school bus related crashes. Nationally, there are an average of 134 school transportation related fatalities each year. Michigan averages 5 school bus related fatalities each year. Michigan's school bus related fatality average of 0.35% is nearly identical to the national average of 0.32%.

Graph 5 shows the overall number of traffic crash fatalities from 1995 through 2004. Graph 6 shows the number of school bus related crash fatalities for the same period.

Graph 5: Overall Number of Fatalities

Graph 6: Number of School Bus Related Crash Fatalities

### Special Circumstances

When completing an Official Traffic Crash Report (UD-10), law enforcement officers are instructed to enter information for each driver, passenger, and vehicle involved in a particular crash. Only vehicles making contact with another vehicle, fixture, or object are recorded. On occasion and in certain types of crashes, a driver will intentionally maneuver, unintentionally maneuver, or lose control of their vehicle because another vehicle encroached upon their path. They may never actually make contact with the encroaching vehicle but nonetheless crash either into another vehicle or some object. The non-contact vehicles are not listed on the UD-10 as they were not directly involved in the crash but they may be identified in the "Crash Diagram and Remarks" section of the UD-10.

A school bus that is involved in a traffic crash as a non-contact vehicle is not identified in terms of driver and vehicle identification but the UD-10 is coded under the section termed "Special Circumstances" as involving/related to a school bus.

The UD-10 instruction manual under "Special Circumstances – School Bus" states, "School bus shall be selected in situations where a school bus is related to the crash in any way. This includes situations where the school bus was a contact vehicle or where other units crashed due to the presence and influence of a school bus, even though the bus itself was not a contact unit."

The driver of a school bus noted on a UD-10 as a non-contact vehicle will not be listed on the report and the crash will not appear on their driving record. The coding is for statistical purposes only.

The collection of this data helps traffic safety experts identify and research any and all crashes that are associated with the presence of a school bus. This is extremely important when considering the number of crashes that occur at school bus stops where the bus itself is not a contact vehicle.

Table 1 shows the total number of school bus related crashes and the total number of school bus involved crashes.

Table 1: School Bus Crashes

	<b>2001</b>	<b>2002</b>	<b>2003</b>
Total School Bus Related Crashes	1,387	1,268	1,293
Total School Bus Involved Crashes	1,271	1,147	1,182
Total School Bus Related Crashes at a Bus Stop	164	168	177
Total Non-Contact Crashes not at a Bus Stop	5	15	12

Table 1 reveals that 91% of school bus related crashes involve a collision by or with the school bus and 12.8% of all school bus related crashes occur at a bus stop.

Based on this information, the main focus of this analysis will address two different groups, which are school bus related crashes that occur away from school bus stops and school bus related crashes that occur at a school bus stop.

Before beginning this analysis, the focus will be on identifying the various types of crashes that occur for overall school bus related crashes.

## Crash Type

All traffic crashes are categorized based on the type of crash as follows:

Single Motor Vehicle  
Head On  
Head On – Left Turn  
Angle  
Rear End  
Rear End – Left Turn  
Rear End – Right Turn  
Sideswipe Same  
Sideswipe Opposite  
Other/Unknown

The UD-10 instruction manual provides the following definitions for crash type:

**Single Motor Vehicle** – A crash that involves only one motor vehicle as defined in this manual. This includes the cases in which a motor vehicle was the only traffic unit, and the only motor vehicle involved that collided with a bicyclist, pedestrian, engineer (railroad train), animal or any other non-motorized object.

**Head On** – The intended direction of travel of both vehicles must be toward each other. The direction that the vehicles are facing when they come to rest or the points of impact on the vehicles are not the determining factors.

**Head On – Left Turn** – When two vehicles are approaching head on and at least one is attempting a left turn.

**Angle** – When the intended direction of travel is basically perpendicular for both drivers and there is a side impact of approximately 90 degrees.”

**Rear End** – When the vehicles are traveling in the same direction, one behind the other, and no turn is involved.

**Rear End – Left Turn** – When the intention of one driver was to make a left turn and was struck by a following vehicle not necessarily in the same lane.

**Rear End – Right Turn** – The same as Rear End – Left Turn except involving right turns.

**Sideswipe Same** – When vehicles traveling in the same direction making side contact...Sideswipe crashes differ from Angle crashes in that a Sideswipe is a glancing impact and should not in itself stop the forward movement of the vehicle.

**Sideswipe Opposite** – When vehicles are traveling in opposite directions and they make a glancing side impact.

**Other/Unknown** – When it is determined that the crash does not fit in one of the other nine types.

Chart 1 shows the breakdown of school bus related crashes by type for the three-year period studied.

Chart 1: School Bus Related Crash Type

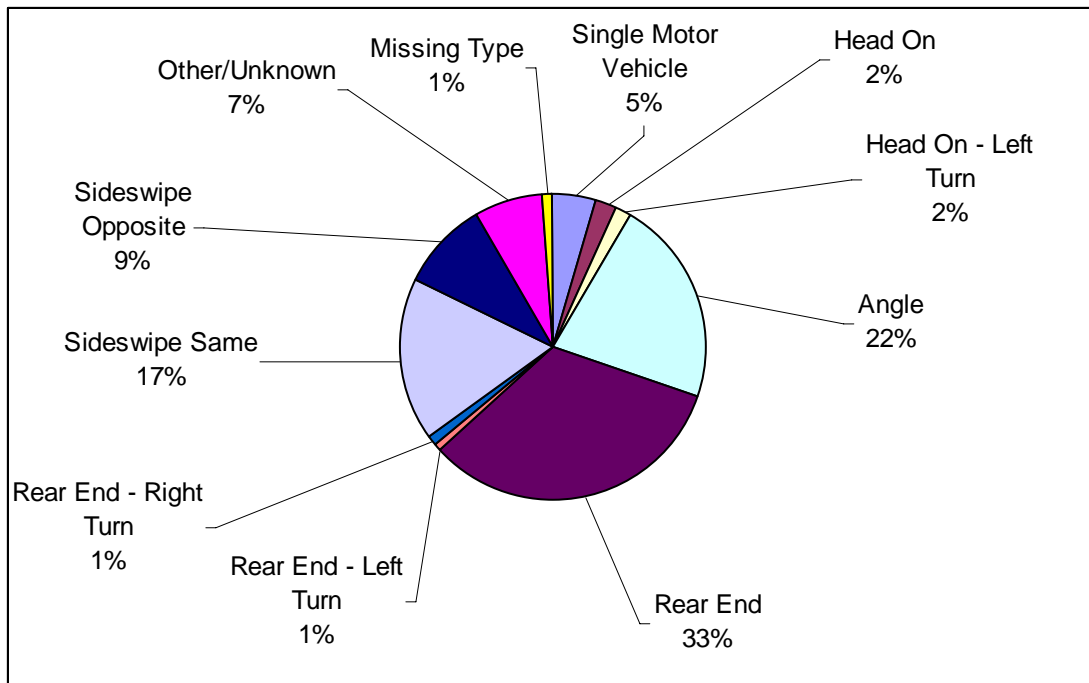

Table 2 shows crash types for school bus related crashes ranked according to frequency of occurrence.

Table 2: Ranking School Bus Related Crash Types

Rank	Type	Number of Crashes
1	Rear End	1,297
2	Angle	857
3	Sideswipe Same	683
4	Sideswipe Opposite	372
5	Other/Unknown	279
6	Single Motor Vehicle	191
7	Head On	83
8	Head On – Left Turn	64
9	Rear End – Right Turn	41
10	Rear End – Left Turn	33

How do school bus related crashes compare to crashes involving heavy trucks and buses? Chart 2 shows a breakdown of heavy truck/bus crashes by type for the same three-year period.

Chart 2: Heavy Truck/Bus Crashes by Type

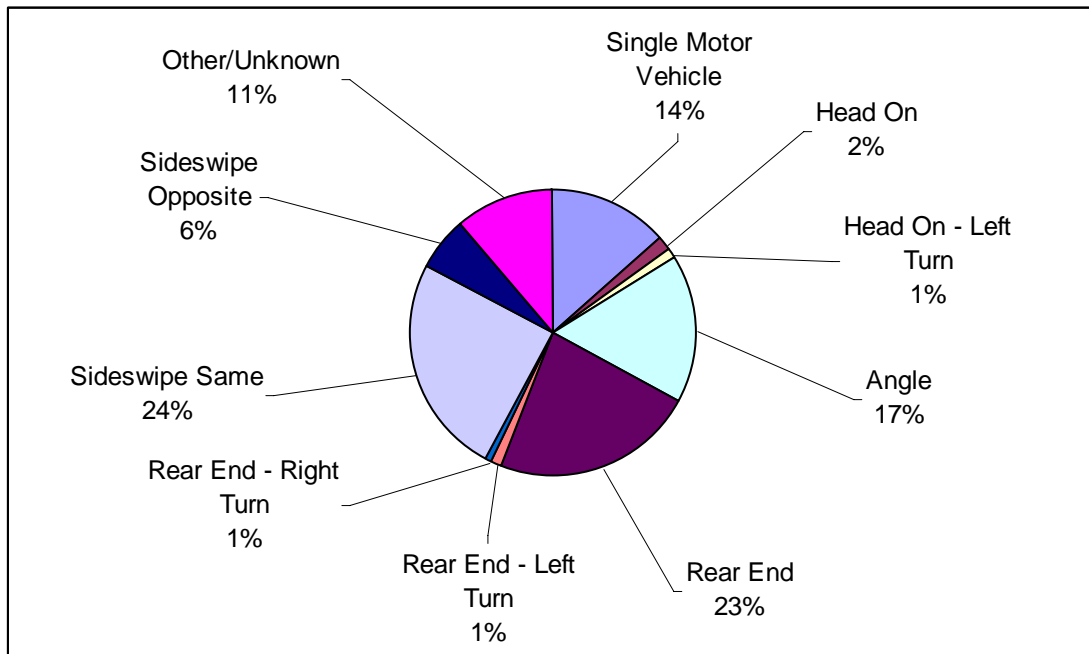

Table 3 shows crash types for heavy truck/bus ranked according to frequency of occurrence.

Table 3: Ranking Heavy Truck/Bus Crash Types

Rank	Type	Number of Crashes
1	Sideswipe Same	13,050
2	Rear End	12,044
3	Angle	8,726
4	Single Motor Vehicle	7,078
5	Other/Unknown	5,883
6	Sideswipe Opposite	3,171
7	Head On	866
8	Head On – Left Turn	583
9	Rear End – Right Turn	488
10	Rear End – Left Turn	474

Finally, Chart 3 shows crash types of all motor vehicle crashes broken into their respective groups for the same three-year period.

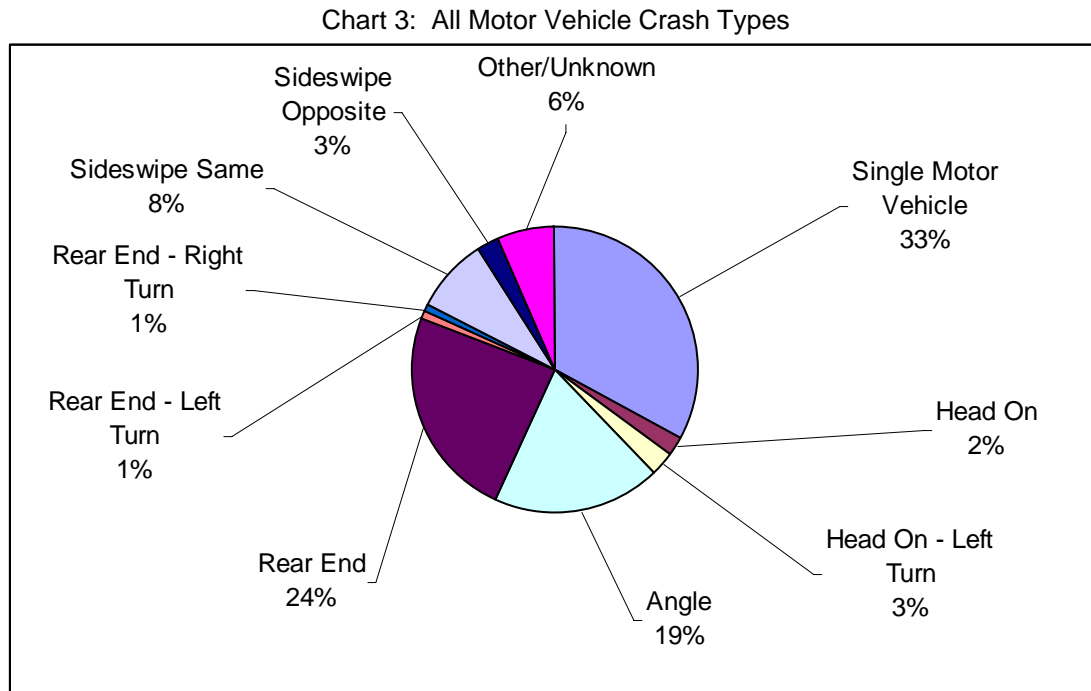

Table 4 shows crash types for all motor vehicle crashes ranked according to frequency of occurrence.

Table 4: Ranking All Motor Vehicle Crash Types

Rank	Type	Number of Crashes
1	Single Motor Vehicle	393,707
2	Rear End	286,897
3	Angle	224,770
4	Sideswipe Same	100,249
5	Other/Unknown	75,942
6	Head On – Left Turn	32,937
7	Sideswipe Opposite	30,573
8	Head On	20,740
9	Rear End – Left Turn	12,322
10	Rear End – Right Turn	9,676

A comparison of school bus, heavy truck/bus, and all motor vehicle crash types was then conducted, which revealed the following facts:

- The top three ranking crash types accounting for 72% of the school bus crashes are the Rear End crash, Angle crash, and Sideswipe Same crash.
- The top three ranking crash types accounting for 64% of the heavy truck/bus crashes are the Sideswipe Same crash, Rear End crash, and Angle crash.
- The top three ranking crash types accounting for 76% of all motor vehicle crashes are the Single Motor Vehicle crash, Rear End crash, and Angle crash.
- The top three ranking crash types for school bus crashes and heavy truck/bus crashes are identical, although the percentages were slightly different.

- Single Motor Vehicle crashes are significantly underrepresented in school bus crashes. Similarly, they are also underrepresented in heavy truck/bus crashes.
- When considering multiple vehicle crashes only, Rear End crashes rank first in both school bus crashes and all motor vehicle crashes and rank second in heavy truck/bus crashes. Nationally, Rear End crashes are also the most common type of multiple vehicle crash.

### Property Damage vs. Injury

Traffic crashes can also be identified by whether there are personal injuries (PIA), fatalities, or property damage (PDA) only.

Table 5 shows how Michigan's school bus related crashes compare to all motor vehicle crashes during the three year study period. Injury crashes include injuries to occupants of all vehicles, not just those riding in the school bus.

Table 5: PIA, PDA, and Fatal Crashes

	# of School Bus Related Crashes	%	# of Overall Crashes	%
PIA	718	17.6%	238,087	20.1%
PDA	3,368	82.4%	946,173	79.9%
Fatalities	12	0.3%	3,553	0.3%

This comparison reveals that PIA crashes occur less often when compared to all motor vehicle crashes, although the percentage is slightly less than 3%.

Occupants in a school bus have a much less chance of injury than the occupants of vehicles that collide with the school bus.

- On average, less than 5% of school bus crashes result in injuries to occupants of the school bus.

### Fault and the School Bus Crash

The term "fault" is commonly associated with "blame" when evaluating a motor vehicle traffic crash, however, fault should not be interpreted as "sole blame" when considering the crash. Almost all traffic crashes have some degree of fault attributed to one or more drivers involved. The most notable exceptions to this are collisions with domestic animals, wildlife, and unexpected mechanical failures.

The UD-10 identifies whether or not a driver has some degree of fault in the form of assigning a "hazardous action" for each driver involved in a crash.

The UD-10 instruction manual states, "A hazardous action coding reflects whether, in the investigating officer's opinion, a person is at fault in any way; i.e., did the person's action(s) contribute to the crash? A coded entry shall be made regardless of whether a citation was issued or a physical arrest was made."

It is important to note that a citation is not always issued to a driver even though they may receive a hazardous action. The burden of proof before taking enforcement action is higher when deciding whether to issue a citation to a driver involved in a traffic crash.

To further illustrate this point, the UD-10 instruction manual states, “Every reasonable effort shall be made to obtain factual information for the completion of the report. If this is not possible, law enforcement shall use their best judgment and record their considered opinions based on their investigation and experience. This should be done even though it may not be possible to substantiate all recorded information or have sufficient evidence to initiate prosecution. When prosecution is initiated, a police officer may issue a citation to a person who is a driver of a motor vehicle involved in an accident if, based on PERSONAL INVESTIGATION, the officer has reasonable cause to believe that the person has committed a misdemeanor under this act or is responsible for a civil infraction in connection with the crash. MCL Section 257.728(8) and 257.742(3).”

Table 6 shows hazardous actions associated with the school bus **involved** crashes throughout the three-year period studied. Crashes that did not involve the school bus as a contact vehicle are not included in the totals but are shown for clarification purposes.

Table 6: Hazardous Action and the School Bus Driver

Action	Number	Percent
None	1,933	54.0%
Speed too fast	51	1.4%
Speed too slow	4	0.1%
Failed to yield	229	6.4%
Disregard traffic control	29	0.8%
Drove wrong way	1	0.0%
Drove left of center	38	1.1%
Improper passing	41	1.1%
Improper lane use	138	3.8%
Improper turn	168	4.7%
Improper/no signal	3	0.1%
Improper backing	196	5.4%
Unable to stop in assured clear distance	227	6.3%
Other	318	8.8%
Unknown	113	3.1%
Reckless driving	0	0.0%
Careless/negligent driving	46	1.3%
blank	65	1.3%
not directly involved	348	8.8%

Table 6 shows school bus drivers were found at-fault in 44.7% and not at-fault in 54% of the crashes where the school bus was directly involved.

The coding labeled “blank” indicates where an entry was omitted and does not include crashes where the school bus was parked/no driver (20 crashes).

Table 7 shows the hazardous actions on the part of the “other” driver involved in a school bus involved crashes.

Table 7: Hazardous Action and the Other Driver

Action	Number	Percent
None	1,114	33.2%
Speed too fast	205	6.1%
Speed too slow	7	0.2%
Failed to yield	350	10.4%
Disregard traffic control	122	3.6%
Drove wrong way	3	0.1%
Drove left of center	46	1.4%
Improper passing	53	1.6%
Improper lane use	66	2.0%
Improper turn	32	1.0%
Improper/no signal	2	0.1%
Improper backing	76	2.3%
Unable to stop in assured clear distance	917	27.3%
Other	185	5.5%
Unknown	88	2.6%
Reckless driving	6	0.2%
Careless/negligent driving	57	1.7%
blank	26	0.8%

The data in Table 7 indicates that in a multiple vehicle crash involving contact with a school bus, the driver of the other vehicle is found at-fault in 66% and not at-fault in 33.2% of the crashes. Fault was undetermined in less than 1% of the crashes because the coding was omitted.

It should also be noted that there were 422 parked vehicles struck by a school bus that are not included in Table 7 because they were parked and unoccupied.

At this point it is prudent to compare school bus involved crashes to all motor vehicle crashes as they relate to fault as shown in Table 8.

Table 8: Hazardous Action in All Motor Vehicle Crashes

Action	Number	Percent
None	989,222	49.4%
Speed too fast	110,240	5.5%
Speed too slow	2,274	0.1%
Failed to yield	173,808	8.7%
Disregard traffic control	42,243	2.1%
Drove wrong way	1,396	0.1%
Drove left of center	10,212	0.5%
Improper passing	12,542	0.6%
Improper lane use	41,305	2.1%
Improper turn	22,239	1.1%
Improper/no signal	2,283	0.1%
Improper backing	37,028	1.8%
Unable to stop in assured clear distance	262,750	13.1%
Other	75,126	3.7%
Unknown	172,396	8.6%
Reckless driving	8,939	0.4%
Careless/negligent driving	39,876	2.0%

Data relevant to hazardous action will now be compared. Table 9 shows the initial comparison, which dealt with at-fault vs. not at-fault in general.

Table 9: Hazardous Action Comparison

	<b>School Bus Driver</b>	<b>Other Driver</b>	<b>All Drivers/All Crashes</b>
At-Fault	44.7%	66.0%	50.6%
Not At-Fault	54.0%	33.2%	49.4%

This data readily shows that school bus drivers are far less likely to be found at-fault in a crash than the “other” driver. Although true with both comparisons, the difference when compared to all drivers in all crashes is less dramatic.

The most common hazardous action on the part of the “other” driver in a school bus crash and all drivers in all motor vehicle crashes in general is “Unable to stop in assured clear distance,” which is closely related to the Rear End crash type and the data is consistent.

Where the school bus driver is concerned, the most common hazardous action identified is “other.” “Unable to stop” is ranked a close third behind “Failed to yield.” The term “other” as used in relation to hazardous action is not defined in the UD-10 instruction manual but experience has shown that this term is often used when there are multiple actions/inactions or actions that do not “fit” the other examples but are nonetheless hazardous in nature.

### Mechanics of the School Bus Crash

Analysis of the data relevant to hazardous action has been completed and the next area studied will be termed the “mechanics of the crash,” which is best described as a depiction of the crash as a whole. This depiction was gained through a review of the “Crash Diagram and Remarks” section of the UD-10. According to the UD-10 instruction manual, this section is used to “diagram the event and add any necessary remarks to explain what happened.”

Table 10 shows the “mechanics of the school bus crash. The data has been separated by the mechanics of the school bus and the other vehicle and only lists actions associated with crashes where the respective vehicle driver was found at-fault.

Table 10: Mechanics of the School Bus Crash

<b>School Bus Driver Actions</b>	<b>%</b>	<b>Other Vehicle Driver Actions</b>	<b>%</b>
<b>Struck vehicle during turn</b>	<b>23.3%</b>	<b>Rear ended school bus</b>	<b>38.5%</b>
<b>Collided with parked vehicle</b>	<b>16.5%</b>	<b>Drove into path of school bus</b>	<b>13.9%</b>
<b>Rear ended vehicle</b>	<b>14.1%</b>	<b>Crossed centerline</b>	<b>8.2%</b>
<b>Backed into vehicle</b>	<b>13.0%</b>	<b>Backed into school bus</b>	<b>7.1%</b>
Drove into path of vehicle/fail to yield	10.1%	Struck school bus during turn	6.4%
Crossed centerline	4.9%	Changed lanes into school bus	5.9%
Changed lanes into vehicle	4.3%	Ran stop sign	4.4%
Lost control	2.6%	Ran traffic signal	4.1%
Collided with object/fixture	2.2%	Improper passing/wrong lane	3.0%
Ran stop sign	2.1%	Lost control	2.5%
Unknown reason	1.6%	Miscellaneous	1.8%
Improper passing/wrong lane	1.4%	Blocking roadway	1.2%
Ran traffic signal	0.9%	Struck parked school bus	1.0%
Backed into fixture/object	0.9%	Ran yield sign	0.7%
Miscellaneous	0.8%	Speed	0.3%
Struck pedestrian	0.7%		
Ran yield sign	0.4%		
Blocking roadway	0.3%		

If the top four actions are totaled for each driver/vehicle, they account for nearly 67% of their respective actions.

The one other significant action that must be addressed is where the other vehicle driver is concerned, it can be seen that the leading action associated with the crash is a Rear End collision with the school bus. There is a specific subdivision within these Rear End crashes that is unique to certain types of vehicles.

State and federal laws require certain vehicles to stop at specifically identified at-grade highway/rail crossings. School buses are one such vehicle type that is required to stop. There were 99 Rear End collisions involving school buses stopped at highway/rail crossings during the three-year period studied, which accounted for 2.75% of all school bus involved crashes.

## Environmental Factors

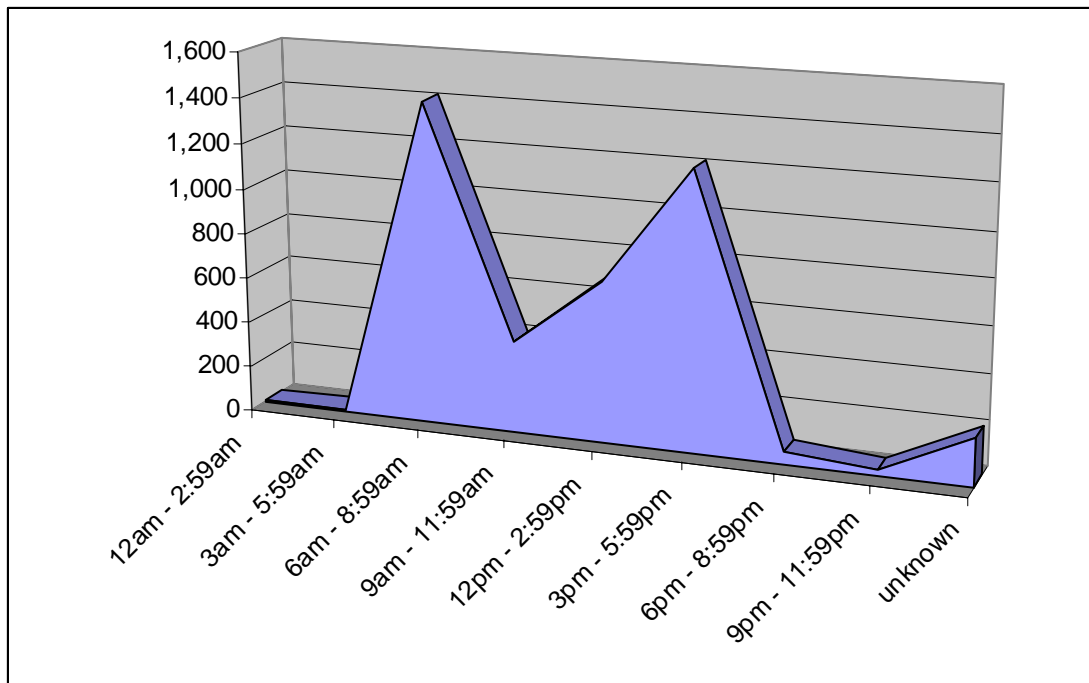

The final area analyzed concerning school bus crashes is the environmental aspect of the crash, which includes time of day, month of occurrence, lighting condition, and road surface condition. Table 11 shows these factors totaled and compared to overall motor vehicle crash statistics.

Table 11: Environment

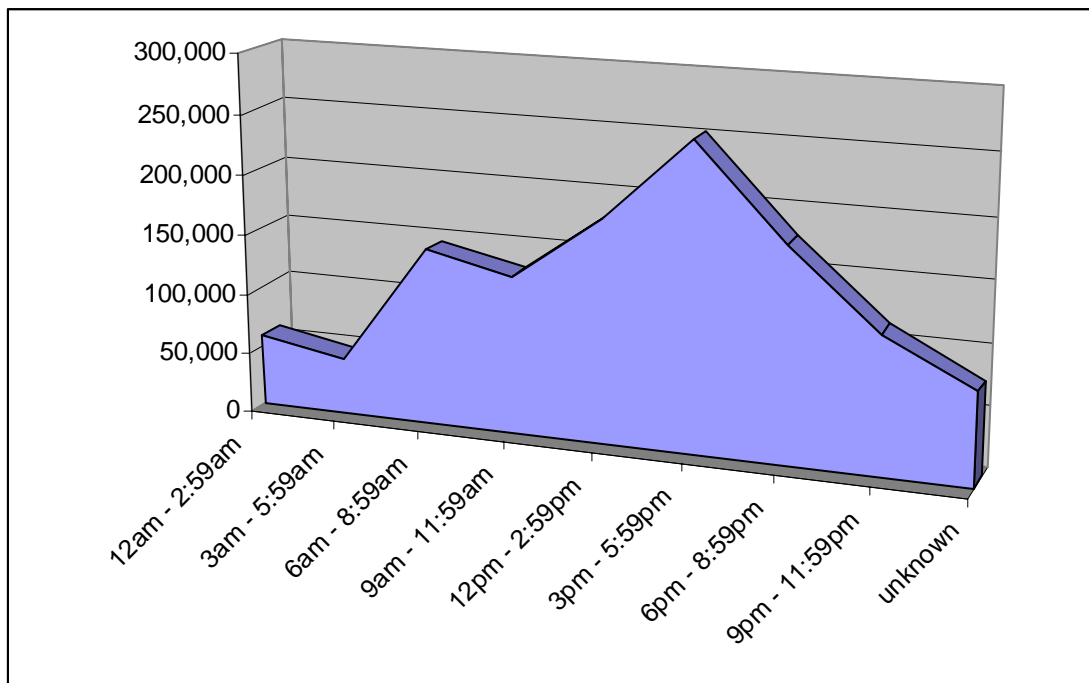

Aspect	School Bus Crashes	All Motor Vehicle Crashes
Dark lighted	2.5%	12.1%
Dark unlighted	2.3%	18.8%
Dawn	6.7%	3.3%
Daylight	86.2%	60.1%
Dusk	0.9%	3.3%
Other/Unknown	0.2%	2.4%
Blank/Missing	1.3%	N/A
January	15.3%	9.5%
February	12.4%	7.6%
March	10.6%	7.7%
April	7.2%	7.1%
May	9.7%	7.9%
June	4.0%	8.1%
July	1.2%	7.4%
August	2.4%	7.5%
September	9.0%	7.7%
October	10.2%	9.6%
November	9.4%	9.9%
December	8.5%	9.9%
Dry	59.7%	67.2%
Wet	18.0%	17.3%
Icy	10.0%	5.5%
Snowy	8.1%	5.5%
Muddy	0.4%	0.2%
Slushy	1.0%	0.7%
Debris	0.1%	0.1%
Other/Unknown	0.7%	3.6%
Blank/Missing	2.1%	N/A
12:00 Mid. - 2:59 AM	0.2%	5.0%
3:00 AM - 5:59 AM	0.2%	3.9%
6:00 AM - 8:59 AM	35.0%	12.3%
9:00 AM - 11:59 AM	10.0%	11.1%
12:00 Noon - 2:59 PM	17.4%	15.5%
3:00 PM - 5:59 PM	30.2%	21.3%
6:00 PM - 8:59 PM	1.3%	14.9%
9:00 PM - 11:59 PM	0.6%	9.6%
Unknown	5.2%	N/A

Graphs 7 through 14 illustrate the environmental data.

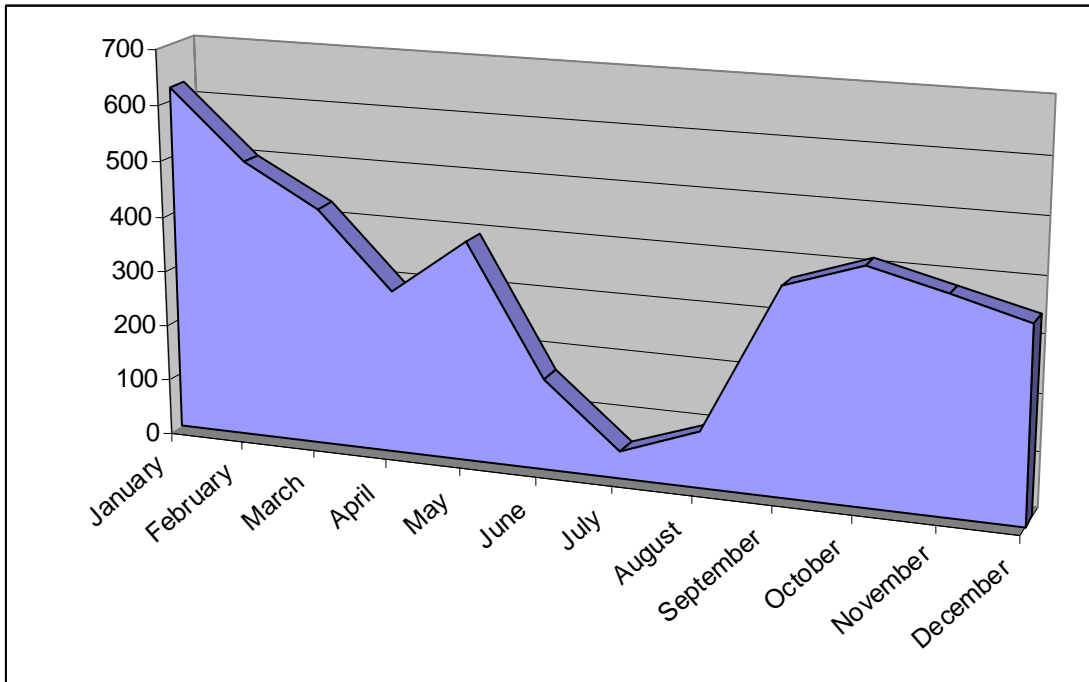

Graph 7: School Bus Crash – Time of Day

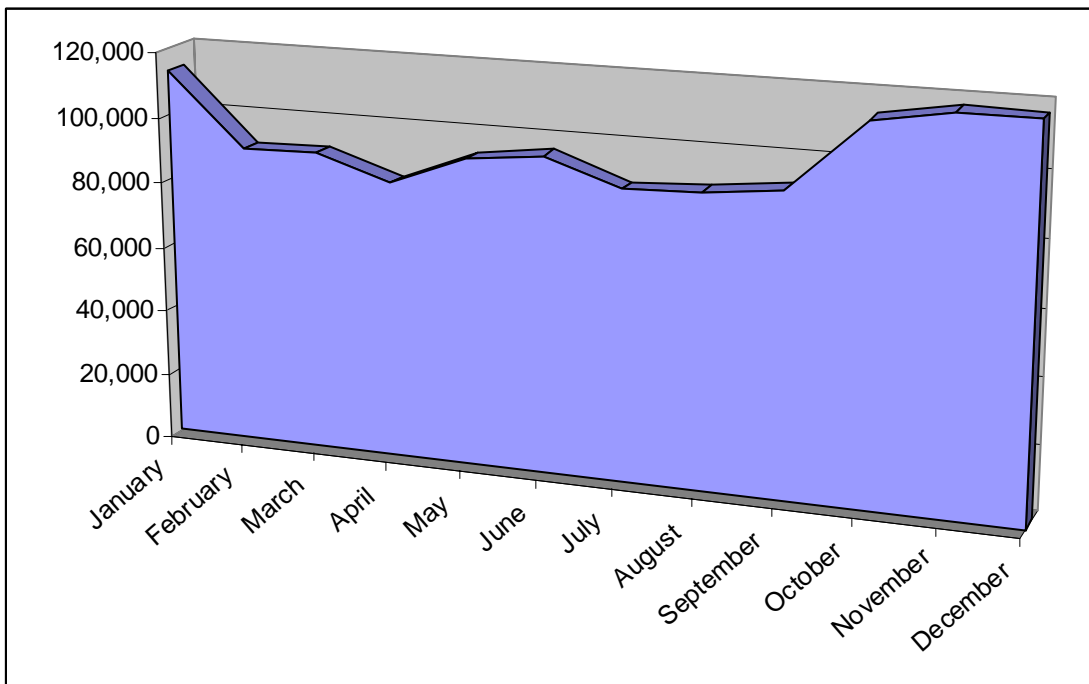

Graph 8: All Motor Vehicle Crashes – Time of Day

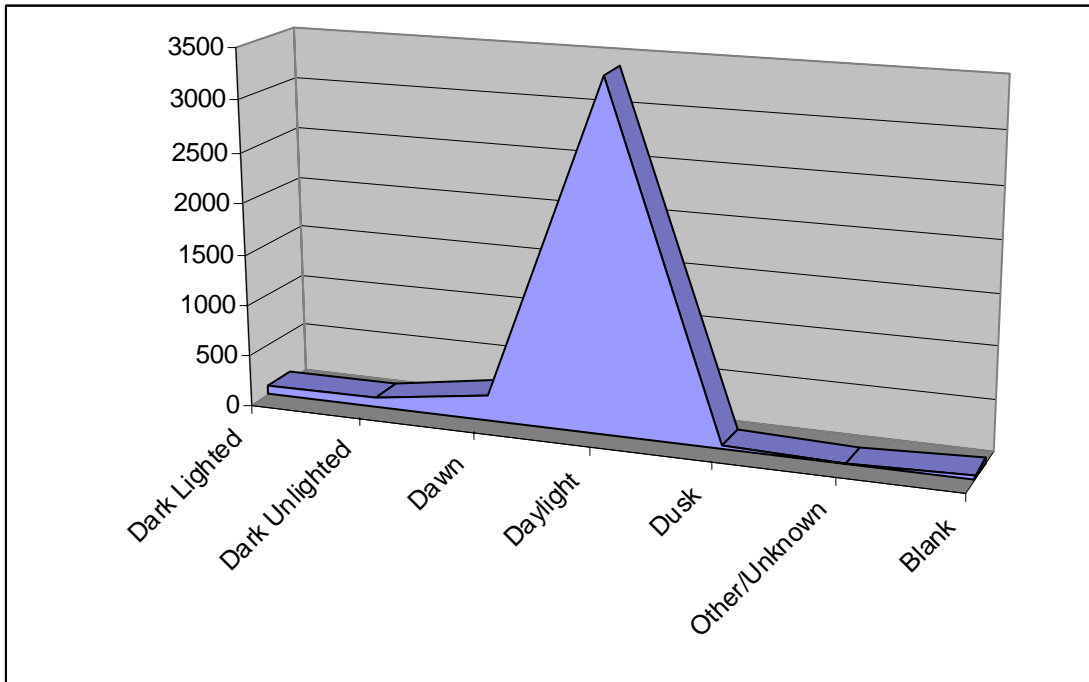

Graph 9: School Bus Crash – Month Occurred

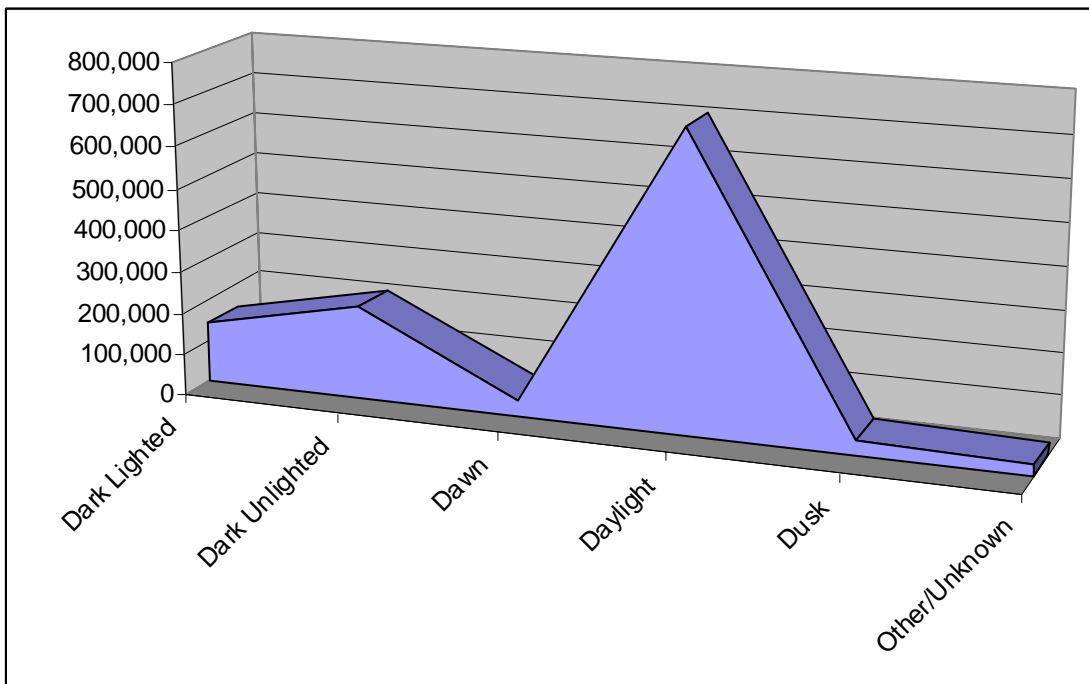

Graph 10: All Motor Vehicle Crashes – Month Occurred

Graph 11: School Bus Crash – Lighting Condition

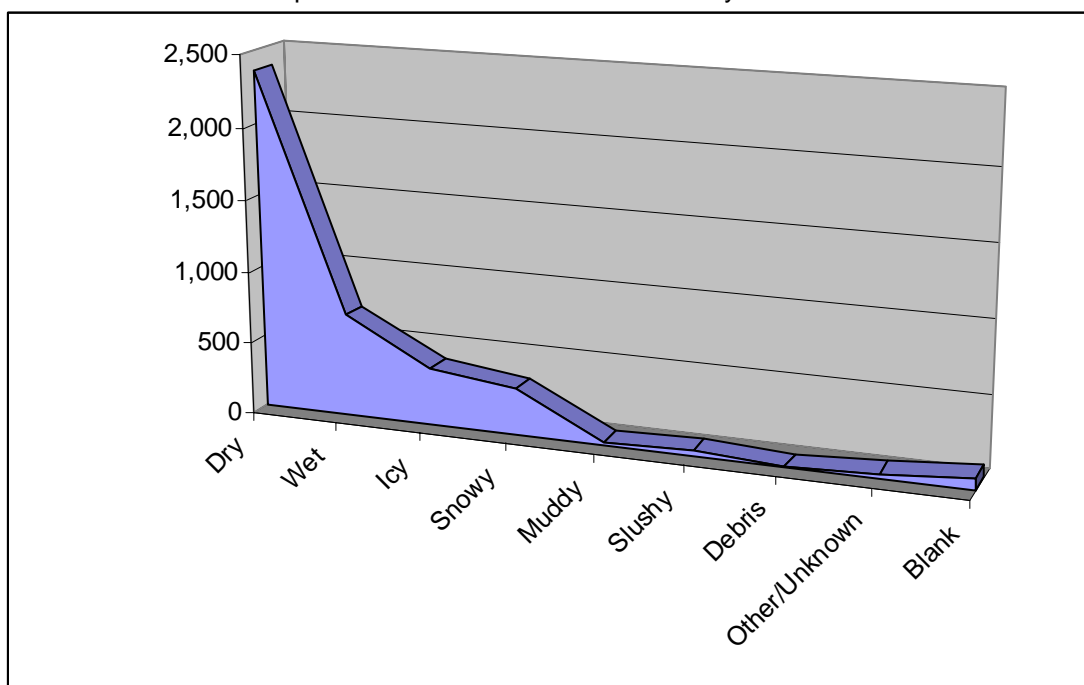

Graph 12: All Motor Vehicle Crashes – Lighting Condition

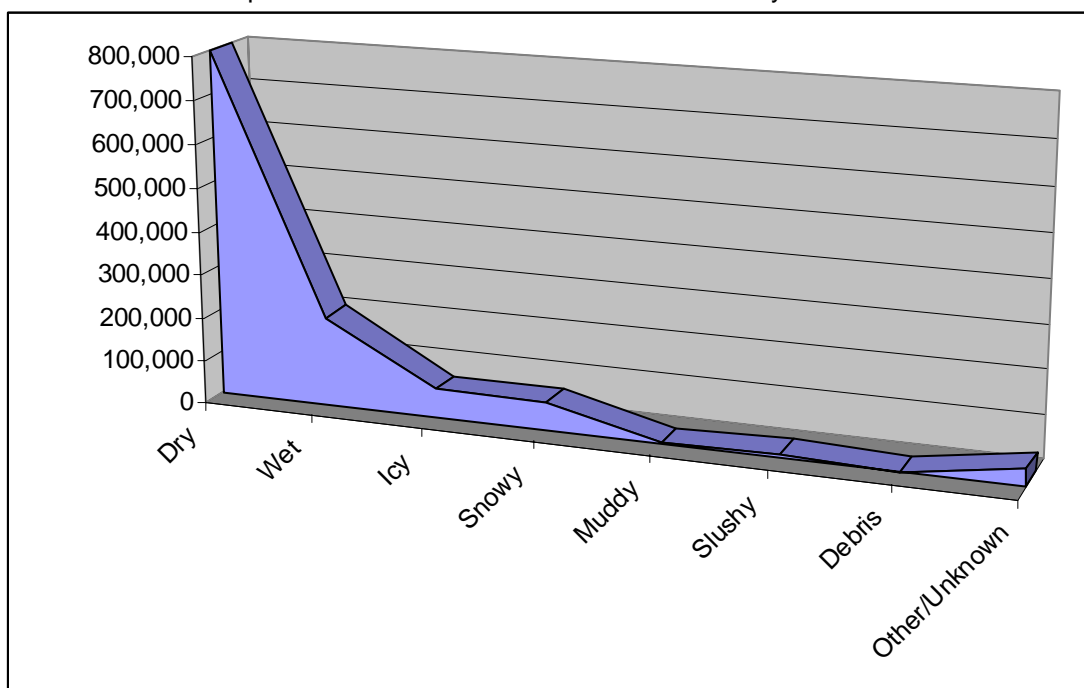

Graph 13: School Bus Crash – Roadway Condition

Graph 14: All Motor Vehicle Crashes – Roadway Condition

The data in Graphs 7 through 14 concerning the various environmental conditions reveals that school bus crashes are consistent with all motor vehicle crashes with the exceptions of time of day and month of occurrence. Both of these factors are consistent, however, with the use of the school bus as primarily limited to daytime and school year operation.

## The School Bus Stop Crash

In the beginning of this analysis the distinction was made concerning crashes that actually involved the school bus as a contact vehicle and crashes that were related to the presence and influence of a school bus.

All the data presented to this point dealt primarily with the school bus being directly involved in the crash as a contact vehicle with the exception of the environmental factors, which were discussed in the context of all crashes whether the school bus was involved in or related to the crash.

This section will analyze all crashes occurring at a school bus stop, including school buses both directly involved with and school buses only related to.

The first area studied is the type of school bus stop. Michigan law allows for two types of school bus stops – the alternately flashing overhead light stop and the hazard light stop. Both types can be further divided into two subgroups but these subgroups have no direct influence on the analysis and as a result will not be addressed.

One major point of clarification must be made at this point. Specific terminology must be used to correctly differentiate between an alternately flashing AMBER overhead light stop and an AMBER hazard light stop. If these very specific terms are not used, it becomes extremely difficult to determine if the school bus had activated the amber overhead lights or the amber caution/hazard lights. For purposes of this analysis, the grouping of crashes based on the type of stop or type of lighting used was based strictly on how the information was explained in the “Crash Diagram and Remarks” section on the UD-10. Therefore, the group identified as an “unknown light stop” is quite large and may not truly represent the size of that group and to a lesser extent the other groups.

Despite this anomaly there is valuable information to be gained by analyzing these crashes.

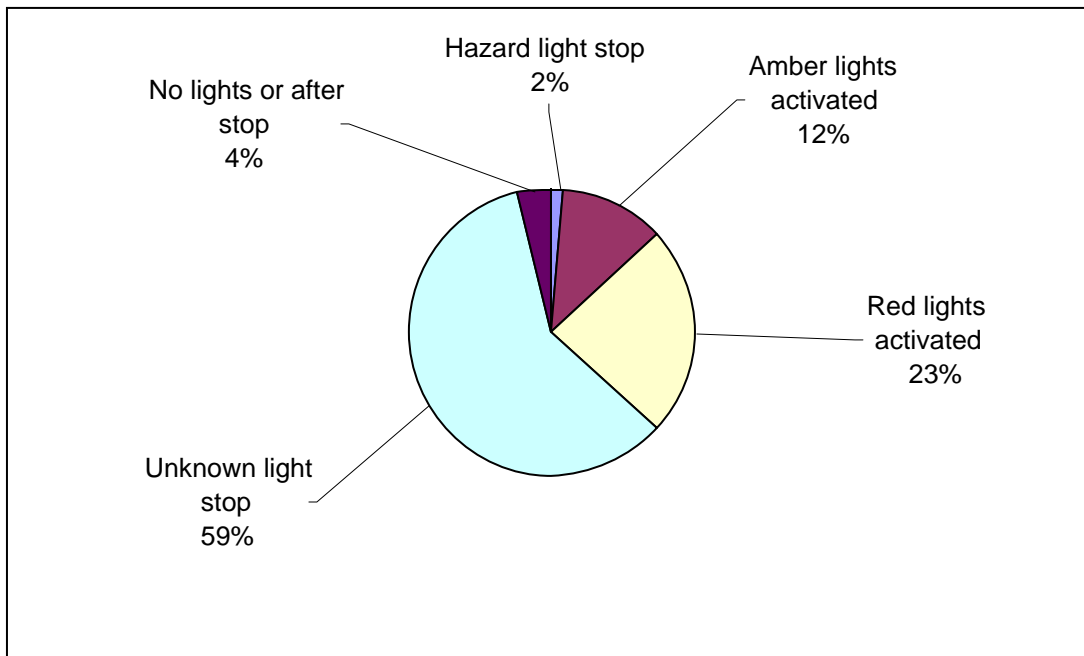

Table 12 shows the breakdown of school bus stop crashes based on the type of stop. There were 509 crashes during or immediately following a school bus stop during the three-year period studied.

Table 12: School Bus Stop Crashes – Type

Type	2001	2002	2003
Hazard light stop	2	2	4
Amber lights activated	20	21	19
Red lights activated	43	46	31
Unknown light stop	94	95	114
No lights or after stop	5	4	9

Chart 4 depicts the crash types listed in Table 12 based on percentage.

Chart 4: School Bus Stop Crashes – Type

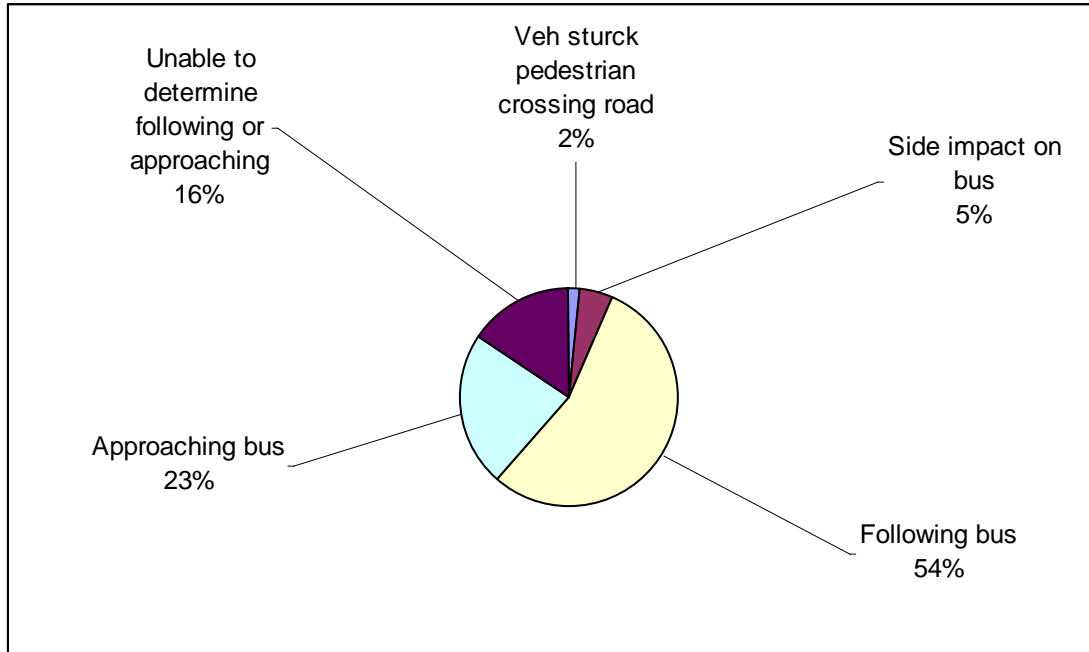

Each type of stop can be divided into school bus related or school bus involved. They include crashes where the school bus was directly involved as a contact vehicle and crashes where there was no contact with the school bus.

- “Following bus” indicates the crash took place behind the school bus. This includes both related (no contact with school bus) crashes and involved (contact with the school bus) crashes.
- “Approaching bus” indicates the crash took place in front of the school bus. This includes both related (no contact with school bus) crashes and involved (contact with the school bus) crashes.
- “Side impact on bus” indicates the impact occurred to the side of the school bus. This includes both related (no contact with school bus) crashes and involved (contact with the school bus) crashes.
- “Unable to determine” indicates that a distinction could not be made from the UD-10 as to whether the colliding vehicle(s) were approaching or following.

The first type of stop analyzed is the unknown light stop. Chart 5 depicts what occurred with these crashes.

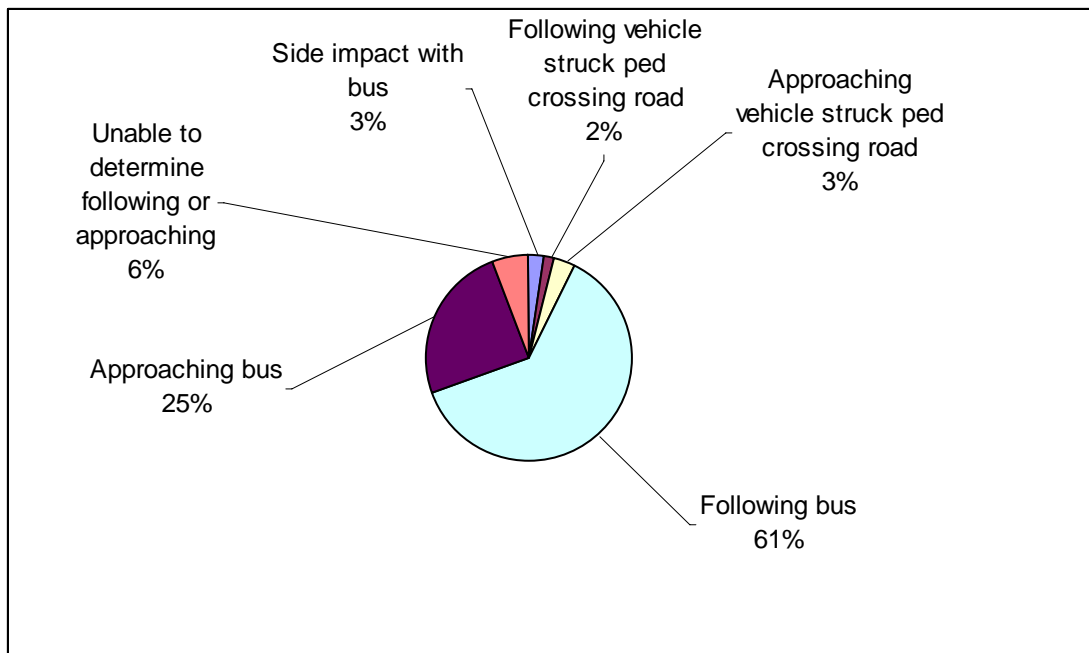

Chart 5: Unknown Light Stop

The next type of stop analyzed is the red lights activated stop where the crash occurred while the school bus was displaying alternately flashing RED overhead lights.

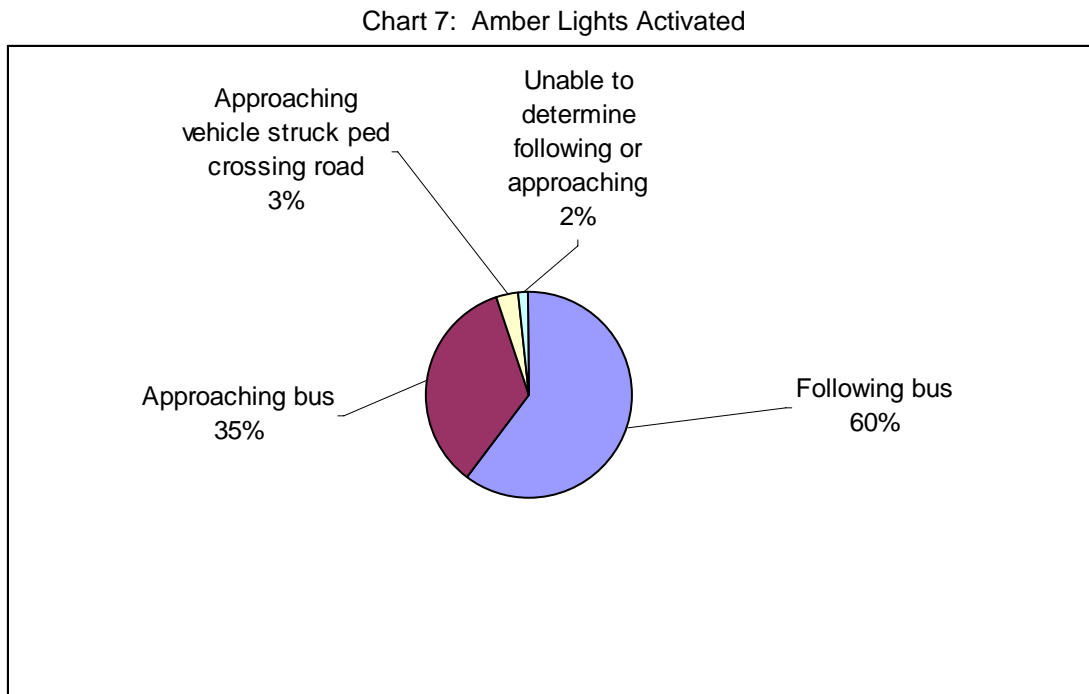

Chart 6 depicts what occurred with these crashes.

Chart 6: Red Lights Activated

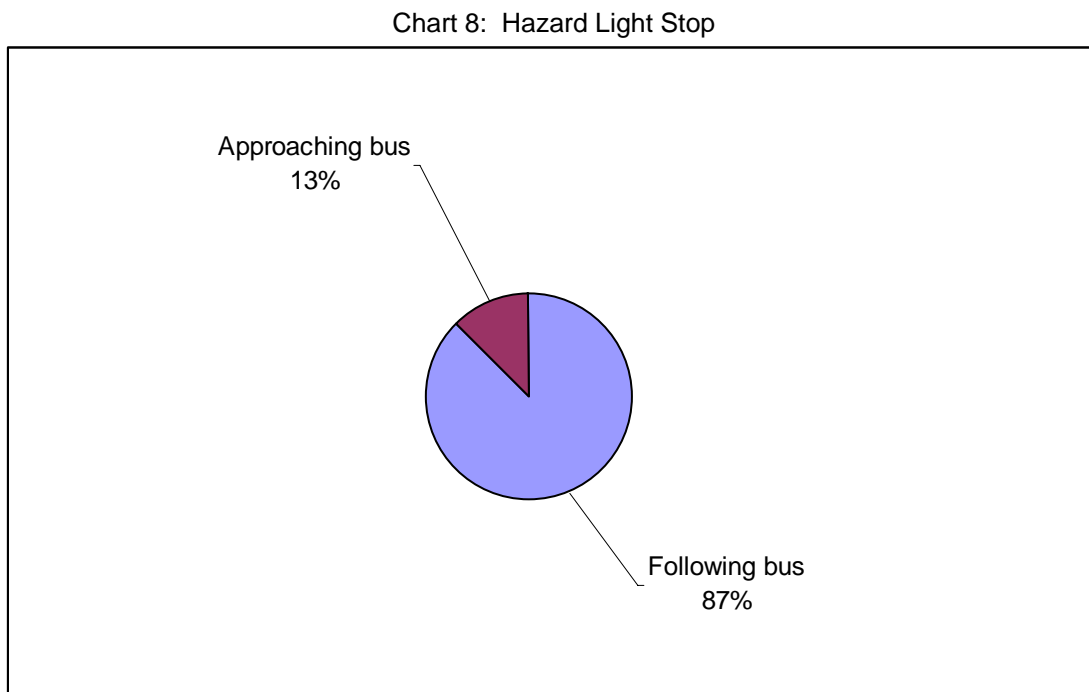

The next type of stop analyzed is the amber lights activated stop where the crash occurred while the school bus was displaying alternately flashing AMBER overhead lights.

Chart 7 depicts what occurred with these crashes.

The next type of stop analyzed is the hazard light stop where the crash occurred while the school bus was displaying hazard lights only.

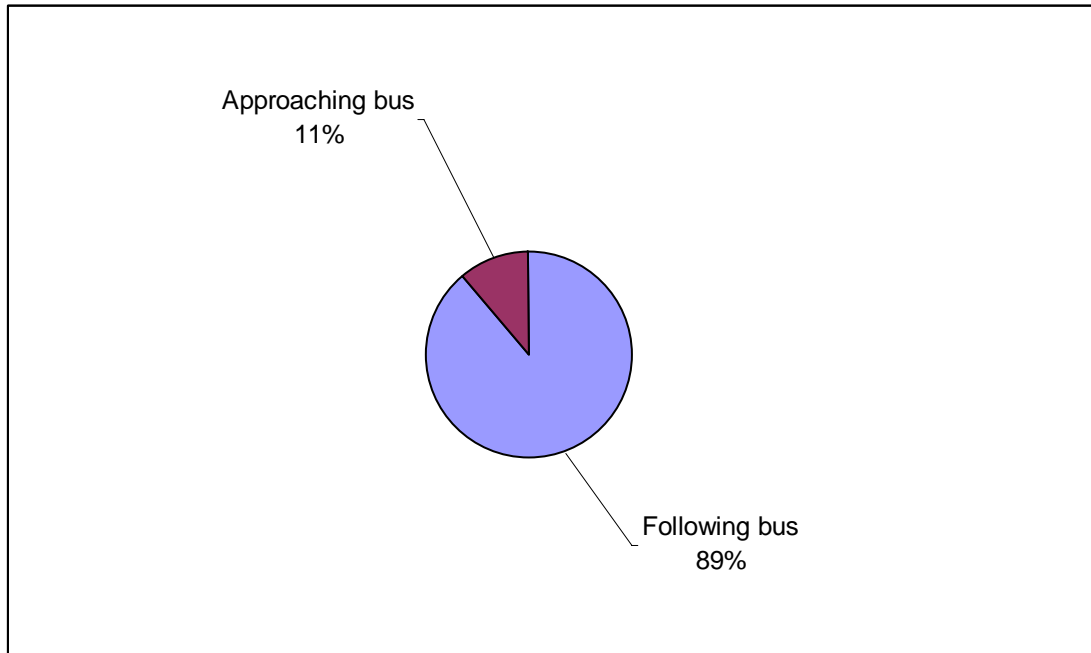

Chart 8 depicts what occurred with these crashes.

The final type of stop analyzed is no lights activated or after the stop where the crash occurred while the school bus was stopped and not displaying any overhead lights or hazard lights, or immediately after the stop was completed.

Chart 9 depicts what occurred with these crashes.

Chart 9: No Lights or After Stop

These five types of crashes at school bus stops can be consolidated into four general categories as shown in Chart 10.

Chart 10: All School Bus Stop Crash Categories

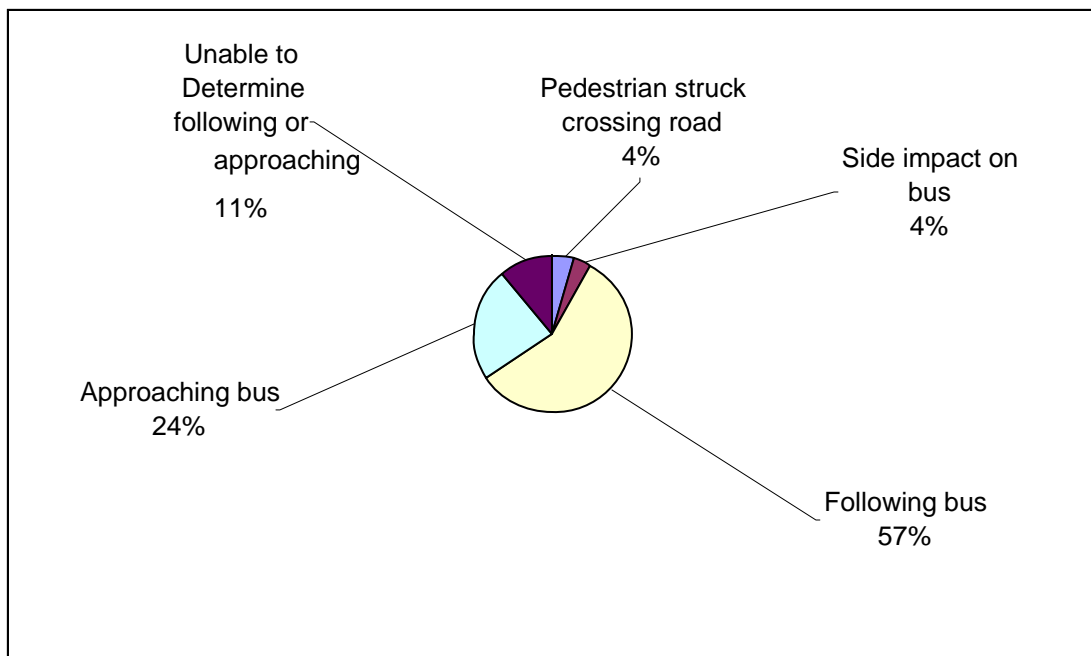

Table 13 shows a final and more detailed breakdown of school bus stop crashes.

Table 13: School Bus Stop Crashes in Detail

	2001	2002	2003	Total
<b>UNKNOWN LIGHT STOP</b>				
Vehicle struck pedestrian crossing road	1	1	3	5
Side impact with school bus	3	5	7	15
<b>FOLLOWING SCHOOL BUS</b>				
Rear ended school bus	25	20	34	79
Rear ended stopped vehicle	27	30	26	83
No contact vehicle exited road	2	1	1	4
<b>APPROACHING SCHOOL BUS</b>				
Failed to yield to stopping vehicle			1	1
Rear ended stopped vehicle	25	23	21	69
<b>UTD FOLLOWING OR APPROACHING</b>				
Rear ended stopped vehicle	11	15	21	47
<b>RED LIGHTS ACTIVATED</b>

<b>FOLLOWING SCHOOL BUS</b>				
Following vehicle struck pedestrian crossing road	2			2
Rear ended school bus	14	20	14	48
Side impact with school bus	1			1
Rear ended stopped vehicle	12	10	2	24
No contact vehicle exited road	1			1
<b>APPROACHING SCHOOL BUS</b>				
Rear ended stopped vehicle	6	10	11	27
Vehicle struck pedestrian crossing road	3		1	4
Head on collision with school bus		3		3
<b>UTD FOLLOWING OR APPROACHING</b>				
Rear ended stopped vehicle	4	1	2	7
<b>YELLOW LIGHTS ACTIVATED</b>				
<b>FOLLOWING SCHOOL BUS</b>				
Rear ended school bus	11	6	6	23
Rear ended stopped vehicle	3	3	6	12
No contact vehicle exited road		1		1
<b>APPROACHING SCHOOL BUS</b>				
Rear ended stopped vehicle	2	8	6	16
Head on collision with school bus	2	1		3
Side impact with school bus		2		2
Vehicle struck pedestrian crossing road	2			2
<b>UTD FOLLOWING OR APPROACHING</b>				
Rear ended stopped vehicle			1	1
<b>HAZARD LIGHT STOP</b>				
<b>FOLLOWING SCHOOL BUS</b>				
Rear ended school bus	2	1	3	6
Rear ended stopped vehicle			1	1
<b>APPROACHING SCHOOL BUS</b>				
Rear ended stopped vehicle		1		1
<b>NO LIGHTS ACTIVATED</b>				
<b>FOLLOWING SCHOOL BUS</b>				
Rear ended stopped vehicle	3	1		4
<b>APPROACHING SCHOOL BUS</b>				
Vehicle struck pedestrian crossing road		1		1
<b>AFTER STOP</b>				
<b>FOLLOWING SCHOOL BUS</b>				
Rear ended school bus	1	1	2	4
No contact vehicle exited road			1	1
School bus struck pedestrian after stop	1	1	4	6
Vehicle struck vehicle after passing school bus			1	1
<b>APPROACHING SCHOOL BUS</b>				
Vehicle struck pedestrian crossing road			1	1

The UD-10 captures information relative to driver condition. The UD-10 instruction manual states, "Select condition of the driver that may have contributed to the crash. This is important for evaluating the effect that driver fatigue, medications, alcohol, drugs, or other conditions have on the crash."

It is important to note that this data may be underreported due to the nature of its collection means. Many of the conditions listed are not readily apparent and can only be recorded if the driver admits to such a condition.

Table 14 shows what driver conditions were selected and does not include the 509 crashes occurring at school bus stops. Only the conditions other than normal are listed.

Table 14: Driver Condition

<b>Condition</b>	<b>% of School bus Drivers</b>	<b>% of Other Drivers</b>	<b>% of All Drivers</b>
Had been drinking		0.78%	2.46%
Illegal drug use		0.39%	0.07%
Fatigue		0.98%	0.17%
Asleep		0.39%	0.24%
Distracted	0.39%	2.94%	0.69%
Using cellular phone		0.19%	0.15%
Unknown	0.19%	8.05%	6.51%

## Summary

- Michigan's 17,718 school buses transport more than 850,000 students to and from school and school related events each year.
- Michigan's school bus fleet accounts for approximately 0.2% of all motor vehicles registered.
- Michigan records approximately 1,400 school bus related crashes each year.
- Michigan's school bus related crashes account for approximately 0.3% of all motor vehicle crashes reported.
- Approximately 91% of the school bus related crashes involve the school bus as a contact vehicle. In the remaining 9%, the school bus is involved with the crash simply because of its presence or influence.
- Michigan recorded 509 crashes at school bus stops from 2001 through 2003, which accounts for 12.9% of all school bus related crashes.
- The three most common types of school bus related crashes are the Rear End crash (33%), Angle crash (22%), and Sideswipe Same Direction crash (17%).
- The three most common types of crashes involving heavy trucks and buses are the Sideswipe Same Direction crash (24%), Rear End crash (23%), and Angle crash (17%).
- The three most common types of crashes for ALL motor vehicle crashes are the Single Motor Vehicle crash (33%), Rear End crash (24%), and Angle crash (19%).
- Injury crashes account for 17.6% of school bus related crashes compared to 20.1% in ALL motor vehicle crashes.
- Property damage crashes account for 82.4% of school bus related crashes compared to 79.9% of ALL motor vehicle crashes.
- School bus related crashes that involve a fatality are 0.3%. There were 12 fatalities from 2001 through 2003, which include 11 in a vehicle other than the school bus and 1 where a child was struck and killed while crossing the roadway.
- On average, school bus drivers are found at-fault in 44.7% of the school bus involved crashes, while the driver of the "other" vehicle is found at-fault 66% of the time. This compares to 50.6% of ALL drivers involved in ALL motor vehicle crashes that are found at fault.
- The top three hazardous actions associated with the school bus driver are "Other" (8.8%), "Failed to yield" (6.4%), and "Unable to stop in assured clear distance" (6.3%).
- The top three hazardous actions associated with the other driver are "Unable to stop in assured clear distance" (27.3%), "Failed to yield" (10.4%), and "Speed too fast" (6.1%).
- The top four actions/mechanics committed by the school bus driver are colliding with a vehicle during a turn (23.3%), colliding with a parked vehicle (16.5%), Rear End collision with another vehicle (14.1%), and backing into another vehicle (13%).

- The top four actions/mechanics committed by the driver of the other vehicle are Rear End collision with the school bus (38.5%), collision after driving into the path of the school bus (13.9%), crossing the centerline and colliding (8.2%), and backing into the school bus (7.1%).
- From 2001 through 2003 there were 99 crashes where a vehicle rear-ended a school bus stopped at a highway/rail crossing.
- School bus crashes occurring during daylight conditions are 86% compared to 60% with ALL motor vehicle crashes.
- School bus crashes occurring from September through June are 96% compared to 85% with ALL motor vehicle crashes.
- School bus crashes occurring on dry roadways are 60% compared to 67% with ALL motor vehicle crashes.
- School bus crashes occurring between 6 a.m. and 6 p.m. are 93%, and the two periods from 6 a.m. – 9 a.m. and 3 p.m. – 6 p.m. have the most crashes. During the same time period (6 a.m. – 6 p.m.), for ALL motor vehicle crashes, only 60% of the crashes were occurring.
- Michigan's 509 crashes at school bus stops occurred as follows:
  - 59% at stops where the type of authorized lighting was undetermined
  - 23% at stops where the alternately flashing RED overhead lights were used
  - 12% at stops where the alternately flashing AMBER overhead lights were used
  - 4% at stops where NO authorized lights were used or immediately after the stop
  - 2% at stops where the HAZARD lights were used.
  - 57% BEHIND the school bus.
  - 24% AHEAD of the school bus.
  - 4% BESIDE the school bus.
  - 4% involved a collision with a pedestrian
- 22 pedestrians were struck at school bus stops from 2001 through 2003 as follows:
  - 16 (73%) by a vehicle as they crossed the roadway, which included 1 fatality
  - 6 (27%) by the school bus
- Driver distraction is present in almost 3% of school bus related crashes at school bus stops. This number is four times greater than the average reported in all motor vehicle crashes and may be underreported based on data collection means.

## Conclusions and Recommendations

### Driver Training

In overall terms, school bus drivers are determined to be at-fault in a crash less often than all other drivers. Some of the possible reasons for this conclusion are the level of training school bus drivers receive and the licensing requirements imposed by the state and federal governments.

However, three areas where there appears to be a need for further training are backing, turning, and maneuvering the school bus through restricted spaces.

Where backing is concerned, state law permits backing on a roadway only within the limits of a city, township, or village that has adopted the Uniform Traffic Code.

Rule 449 of the Uniform Traffic Code states:

“(1) The driver of a vehicle shall not back the vehicle unless the movement can be made with reasonable safety and without interfering with other traffic.

(2) A vehicle shall not be backed a distance of more than 60 feet.

(3) A vehicle shall not be backed into an intersection; except that a vehicle may be backed into an intersection when it is not otherwise possible to turn about and when the movement can be made safely without interfering with other traffic.”

Outside a township, village, or city limits a school bus cannot lawfully back up on a roadway without violating the provisions of the Michigan Vehicle Code.

Where turning and maneuvering through restricted areas are concerned, the numbers of crashes involving the school bus turning and colliding with another vehicle or striking parked vehicles are excessive. There are also a large number of “left of center” violations where part of the school bus, usually the driver side mirror, strikes an oncoming vehicle. These crashes suggest a need for improved training as it relates to driving a “large” vehicle.

### Recommendation #1

- Encourage Michigan’s school districts and pupil transportation providers to better train drivers in the areas of turning and maneuvering the school bus with special emphasis on space required for maneuvering a large vehicle.
- Encourage Michigan’s school districts and pupil transportation providers to better train school bus drivers in backing maneuvers and emphasize that backing on the roadway when outside a city, township, or village limit is prohibited.
- Encourage the Michigan Department of Education to remind all school districts and pupil transportation providers of laws relevant to school bus backing.
- Encourage all school districts and pupil transportation providers to initiate a policy that prohibits school bus backing on the roadway except where provided by statute. This includes reviewing and reestablishing routes in order to minimize and/or eliminate instances where the school bus must back up.

## **Conspicuity Issues**

Nearly 13% of all school bus related crashes occur at a school bus stop. An additional 2.5% of all school bus related crashes occur at highway/rail crossings. The one thing common to all these crashes is:

The school bus is stopping ON the roadway in a place where other drivers do not expect it to stop.

State law requires drivers to stop for a school bus that is STOPPED and displaying alternately flashing RED overhead lights. Many years ago, school buses were only equipped with four red overhead lights but that changed when the federal government adopted the eight-light system as an alternative to the four-light system. Michigan then amended statute requiring that school buses manufactured after October 1, 1990 and used in this state, be equipped with the eight-light systems.

It is apparent that many drivers are confused when it comes to the eight-light system. Some drivers stop for the alternately flashing AMBER overhead lights and some do not, which usually results in a Rear End collision.

The other factor that must be considered is the number of crashes occurring at highway/rail crossings. Fortunately, these are not crashes where the school bus collided with a train but rather crashes where the school bus stopped at the crossing and was Rear Ended by another vehicle.

State and federal laws require a school bus to stop at ALL at-grade highway/rail crossings, except those that are controlled by a traffic signal or where directed by a police officer to proceed.

When considering the significant number of crashes at these crossings, it is apparent that the average driver is unaware of this requirement.

The National Highway Transportation Safety Administration (NHTSA) has historically been reluctant to allow any lighting on vehicles that is distracting, confusing, or conflicts with standard required lighting. However, NHTSA has granted an exception when it comes to school buses. They recognize that school buses are unique among all motor vehicles in the fact that they frequently stop traffic at unexpected places.

The second recommendation is based on these findings and NHTSA's position on additional lighting for school buses.

### **Recommendation #2**

- Encourage school districts and pupil transportation providers to equip their school buses with more effective overhead lighting systems. There currently are systems available that utilize LED strobe type lighting that greatly enhance visibility and conspicuity of the system.
- Amend the Michigan Vehicle Code and the Pupil Transportation Act to allow for additional lighting that enhances the alternately flashing overhead lighting system as long as any additional lighting does not conflict with federal standards. There are three specific systems addressed.
  - Lighting on the rear of the school bus directly wired into the alternately flashing overhead lights that displays a message or signal consistent with the overhead light system.

The purpose of this system would be to augment the overhead light system and warn drivers approaching from the rear that the school bus is stopped or about to stop.

- Lighting on the rear of the school bus directly wired into the hazard light system that displays a message consistent with expectations at highway/rail crossings and hazard light school bus stops.

The purpose of this system would be to augment the hazard light system and warn drivers approaching from the rear that the school bus is stopped or about to stop.

- Lighting on the front sides of the school bus directly wired into the alternately flashing overhead lights that displays a message or signal consistent with the overhead light system. This lighting would consist of one additional amber light and one additional red light mounted on each side near the front of the school bus and on the same level as the overhead lighting system.

The purpose of this system would be to enable a pupil at a school bus stop to identify whether the amber or red overhead lights are activated.

### **School Bus Stop Issues**

Of the 3,948 school bus related crashes studied, 509 (12.9%) occurred at a school bus stop. Of these school bus stop related crashes, 22 (4%) involved a pedestrian/pupil that was struck outside of the school bus. Of these 22 crashes, 16 (73%) were struck by a vehicle other than the school bus, while 6 (27%) were struck by the school bus.

In the 16 crashes where a pedestrian/pupil was struck there was one fatality. All of these crashes involved a vehicle other than the school bus colliding with the pedestrian/pupil and ALL of the crashes occurred as the pedestrian/pupil was crossing the roadway either to or from the school bus.

### **Recommendation #3**

- Encourage School Districts to discontinue placement of school bus stops where pupils are required to cross the roadway.
- Encourage all law enforcement agencies to vigorously prosecute anyone violating provisions of the Michigan Vehicle Code concerning passing a school bus when displaying alternately flashing red overhead lights.
- Encourage all school districts to enact and enforce rules governing school bus stops requiring the pupil to be present at the school bus stop when the school bus arrives. Progressive sanctions up to and including suspension of school transportation privileges for violations of policy and strict, uniform enforcement of policy are essential.
- Evaluate school bus driver training in the area of discharging pupils and develop a method to ensure the pupil has safely exited the school bus.
- Provide this report to the Michigan Department of Education for their review and potential statutory amendment consistent with the proper placement of school bus stops.
